## **1 About this manual**

This manual is intended for Kvaser Leaf Light R v2 users. This document contains a description of the hardware's properties and general instructions for connecting the device to a computer.

## 2 Introduction

This section will describe the functions and features of the Kvaser Leaf Light R v2.

### 2.1 Welcome to Kvaser Leaf Light R v2

Figure 1: Kvaser Leaf Light R v2

Kvaser Leaf Light R v2 is a reliable low cost product. In hostile environments where dust and water are the norm, the IP65 rated housing assures reliable protection. With a time stamp precision of 100 microseconds it handles transmission and reception of standard and extended CAN messages on the bus. It is compatible with applications that use Kvaser's CANlib.

This guide applies to Kvaser Leaf Light R v2 devices listed in Table 1.

Device	Product Number
Kvaser Leaf Light R v2	73-30130-00921-9

## 2.2 Major features

- USB CAN interface.
- IP65 rated lightweight aluminum housing.
- Quick and easy plug-and-play installation.
- Supports both 11-bit (CAN 2.0A) and 29-bit (CAN 2.0B active) identifiers.
- 100% compatible with applications written for other Kvaser CAN hardware with Kvaser CANlib.
- High-speed CAN connection (compliant with ISO 11898-2), up to 1 Mbit/s.
- Fully compatible with J1939, CANopen, NMEA 2000<sup>®</sup> and DeviceNet.
- Supports simultaneous usage of multiple Kvaser interfaces.

## 2.3 Additional software and documentation

The Kvaser CANlib SDK includes everything you need in order to develop software applications interacting with Kvaser CAN and LIN hardware. The SDK contains full documentation and many sample programs, written in C, C++, C#, Delphi, Python and Visual Basic. Kvaser CAN and LIN hardware is built around the same common software API. Applications developed using one device type will run without modification on other device types.

The latest versions of documentation, software and drivers can be downloaded for free at [www.kvaser.com/download](http://www.kvaser.com/download).

## 3 Kvaser Leaf Light R v2 hardware

In this section you can read more about the CAN channels, power supply and LED indicators.

### 3.1 Hardware installation

For the Kvaser Leaf Light R v2 to communicate with the host computer, a compatible version of the Kvaser driver and firmware must be installed.

After the driver has been installed on the host computer, the firmware may then be downloaded and installed on the Kvaser Leaf Light R v2.

The latest version of the driver and firmware can be downloaded from [www.kvaser.com/download](http://www.kvaser.com/download).

The driver is installed by running the file `kvaser_drivers_setup.exe`.

The Kvaser Leaf Light R v2 may be inserted in any free USB socket on the host computer. You do not need to switch the power off before inserting or removing the device.

For information on how to upgrade the firmware, see Section 4.4, Updating the firmware, on Page 11.

### 3.2 USB connector

The Kvaser Leaf Light R v2 has a standard USB type "A" connector.

Figure 2: A standard USB type "A" connector.

### 3.3 CAN channel

The Kvaser Leaf Light R v2 has one CAN Hi-Speed channel with a 9-pin D-SUB CAN connector. See Section 4.2, CAN connector, on Page 11 for details about the pinout.

Figure 3: 9-pin D-SUB CAN connector

### 3.4 Power supply

The Kvaser Leaf Light R v2 is powered from the USB port.

### 3.5 LED Indicators

The Kvaser Leaf Light R v2 has two LEDs as shown in Figure 4. Their functions are shown in Table 2 on Page 9.

Figure 4: LEDs on the Kvaser Leaf Light R v2.

LED	Function	Description
PWR (Green)	Power	Steady light when unit is powered and working.
	USB configuration	Blinking once every three seconds when something is wrong with the USB connection.
	Firmware	2 Hz flash if something is wrong with the firmware or configuration.
CAN (Yellow)	CAN RxTx	Status for CAN channel.

Table 2: LEDs on the Kvaser Leaf Light R v2.

### 3.6 Troubleshooting

Use “Kvaser Device Guide” in the Control Panel to verify that the computer can communicate with the Kvaser Leaf Light R v2. If the firmware version shown is all zeros, there are communication problems. If the LEDs are not flashing or do not light up at all, check the power supply.

## 4.3 CAN bus termination

Every CAN bus must be terminated with a 120 Ohm resistor at each end of the bus. The Kvaser Leaf Light R v2 does not contain any CAN bus termination, because their inclusion could cause severe disturbance in a system which is already correctly terminated.

For laboratory or testing use, the exact value of the termination resistors is not always critical. Sometimes a single terminator is sufficient. For production, proper termination is essential. If you see error frames on the bus, you should check the termination.

**To save yourself a lot of trouble, always terminate the CAN bus properly.**

## 4.4 Updating the firmware

For the Kvaser Leaf Light R v2 to communicate with the host computer, compatible versions of the Kvaser CANlib (including driver) and firmware must be installed.

The latest versions of firmware and drivers can be downloaded for free at [www.kvaser.com/download](http://www.kvaser.com/download).

Connect the Kvaser Leaf Light R v2 to your host computer with the USB cable. Start the update.exe application. A window opens where you should see the device listed if correctly connected to your host computer. Select the device to update and click the Next button. Read the Release Notes carefully.

Click on the Start Upgrade button to start programming. Programming takes approximately 30 s. The progress is displayed on the screen.

If you see any error messages, try to disconnect and reconnect the device, and then perform the operation again.

To verify that the firmware has been updated, open "Kvaser Device Guide" in Control Panel. Select "Kvaser Leaf Light R v2" in the tree view to the left, and click on the channel. The firmware revision information appears in the right half of the window.
